**DETAILED ACTION**

Claims 1-7 are present for examination.

***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-5, drawn to an isolated nucleic acid fragment encoding an N-acetylglutamate kinase selected those nucleic acids that encode an amino acid sequence at least 95% identical to the amino acid sequences selected from the group consisting of SEQ ID NO: 2, SEQ ID NO: 4, SEQ ID NO: 6, and SEQ ID NO: 8 and chimeric genes and host cells comprising said nucleic acid fragments.

Group II, claim(s) 6, drawn to an isolated nucleic acid fragment encoding an N-acetylglutamate kinase having the amino acid sequence set forth in SEQ ID NO: 12 with the claimed variations.

Group III, claim(s) 1-7, drawn to a method for evaluating a compound for its ability to inhibit the activity of an N-acetylglutamate kinase comprising using a nucleic acid which encodes an N-acetylglutamate kinase.

NOTE: for invention I above, restriction to one of the following (A) through (D) is also required.

- (A). SEQ ID NO: 1 or a sequence encoding SEQ ID NO: 2.
- (B). SEQ ID NO: 3 or a sequence encoding SEQ ID NO: 4.
- (C). SEQ ID NO: 5 or a sequence encoding SEQ ID NO: 6.
- (D). SEQ ID NO: 7 or a sequence encoding SEQ ID NO: 8.

The inventions listed as Groups I through III and (A) through (D) do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The products of Groups I and II and (A) through (D) are directed to completely different polynucleotides which are structurally unrelated and do not share the same or corresponding special technical features. The only shared technical feature of the different polynucleotides of Groups I and II and (A) through (D) and the method of Group III is a nucleic acid that encodes an N-acetylglutamate kinase. As Kaneko et al. (DNA Research, Vol 3, page 109-136, 1996 and EMBL Database Accession Number BAA17356, 2/7/1999, see IDS references) teach a nucleic acid encoding an N-acetylglutamate kinase, the shared technical feature is not a special technical feature. Where a group of inventions is claimed in an application, the requirement of unity of invention shall be fulfilled only when there is a technical relationship among those inventions involving one or more of the same or corresponding special technical features. The expression "special technical features" shall mean those technical features that define a contribution which each of the claimed inventions, considered as a whole, makes over the prior art.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
